Climbing Trip-L-Crop Tomato

Climbing Tomato

TRIP-L-CROP

Climbing Trip-L-Crop Tomato is by far the most productive of all Tomatoes, often producing 2 to 3 bushels from one vine. The plants are of rank growth, sending out long runners capable of setting clusters of fruit at each joint. This feature is not found in ordinary varieties.

Climbing TRIP-L-Crop is a variety with many superior qualities. Vines grow rapidly to a height of 10 to 18 feet (sometimes more than 20 feet) when grown on a trellis. A trellis, however, is not necessary as it will outyield other varieties when grown in bush form. The beautiful, large crimson fruits average 3½ inches

across and 2¾ inches deep, with some as deep as 3½ inches and as wide as 5 inches across. The fruits are solid with meaty center surrounded by small seed cells which are separated by solid divisions, which makes the tomato unexcelled for both slicing and canning. It is free from blight and disease and drought resistant. It is not uncommon to pick more than two bushels of ripe tomatoes from one vine. The increasing demand for seed substantiates all the claims we make for this wonderful Tomato. For big yields and tall vines start early and set out as soon as danger from frost is past.

Archias' Hybrid TOMATOES

Advantages of Hybrid Tomatoes

It has been proven that true hybrids grow faster than open pollinated varieties, produce greater yields, show more vigor, and bear a more uniform product over a longer period of time. It is possible to incorporate into hybrids, disease resistance, the best feature of their parents, and to eliminate many of the bad features. If you want uniform fruit, extra yield, and better quality, we highly recommend the hybrid varieties listed below. The proper use of fertilizer in your soil is essential with hybrids as well as with other varieties.

KOREAN LESPEDEZA

KOREAN LESPEDEZA. America's Greatest Legume. Adapted to any soil. Makes crop of hay or seed same year sown. Reseeds itself each year, unexcelled for pasture, hay or soil building. Drought resistant. Height 15 to 24 inches. 10 pounds per acre will produce a heavy crop of hay the second year, but 15 to 20 pounds will secure a full crop of seed for harvest the first year. Our stock is of the highest quality and will give satisfaction. See Red List for quantity prices.

LESPEDEZA SERICEA. New perennial Lespedeza. An Oriental perennial legume; grows on poor land, acid or sour soil as well as on rich soil. Great drought resister with an enormous root system. Enriches the soil, starts growth early in spring and gives at least three cuttings a season with as high as three tons of hay per acre from a single cutting. Plant very shallow in 3½-ft. rows on a well prepared bed, in late spring, 3 to 4 lbs. per acre. 5 lbs., \$2.00; 10 lbs., \$3.25, postpaid.

EARLY LESPEDEZA. (U.S.D.A. No. 19604.) Earlier and Heavier Yield. New early Lespedeza—averages 6 inches taller, much earlier, and heavier yielding than common strains, making it ideal for folks who want a taller and earlier type and who have not had success with ordinary Lespedeza. Grows anywhere—especially valued where other legumes will not grow. Will grow on the sourest soil and will build it up by adding nitrogen. Seed is short—order early. Plant same as Korean Lespedeza.

See Field Seed Price List for quantity prices.

SOY BEANS

Especially valuable in permanent pastures. We offer only the broad leaf variety which is recommended for this section. See Field Seed price list for prices.

DWARF ESSEX RAPE

Reduces pork production costs. Enormous producer; grows quick. Hog and sheep raisers plant plenty of Rape for pasture. Sow 6 to 8 pounds per acre. Pasture 6 to 8 weeks after seeding. BROME GRASS

"THE MIRACLE DROUGHT RESISTER"

Sow 20 lbs. per acre.

One of the most sensational additions that American agriculture has received in years. It is rather slow the first season, but the second year is great and once established you have it for keeps. It is hardy, permanent, stands the driest of droughts, the hottest summers, and the coldest winters. It is the first green grass in the spring, the last in the fall, and stays green all summer when other grasses are dry. It is very high in feeding value; will carry from 50 to 100 per cent more livestock per acre than Blue Grass. Cut for hay, you will have from three to four tons per acre. All classes of livestock like it as it is very palatable. It is a grass and so it cannot poison the stock. Sow either fall or spring using 15 to 20 lbs. per acre. Have a firm, well packed seed bed, harrow in lightly and roll well if at all possible. Do not cover too deeply—one-fourth to one-half inch is plenty. You can get two crops in a season. Harvest when it is one-third to one-half in bloom. It is easily killed under cultivation if you want to get rid of it. Our Brome Grass is Achenbach (Southern Strain), Native Kansas Strain; 10 lbs., \$5.25, postpaid. See Field Seed List for quantity prices.

ALFALFA

Archias' northern and native grown Alfalfa deserves to rank first among legumes. Extremely deep rooted, withstands drought as well as severe winters. It furnishes more green foliage, more pasture and dry hay per acre than any known variety of hay or grass. Plant Adapted Seed—approved for AAA payments, save money and get dependable seed by buying your Alfalfa from Archias.

"Sure Brand" Kansas Grown.
"Sure Brand" Oklahoma, Approved.
"Sure Brand" Rocky Mountain
"Sure Brand" Utah Beehive
"Sure Brand" Genuine Grimm.

GERMAN MILLET

Sow 30 to 40 pounds to the acre

ARCHIAS' GOLDEN or HAY MILLET. It is sown in the spring, and after harvesting leaves the ground in the finest condition for Wheat.

PROSO MILLET. Also known as Hog Millet. Grown almost exclusively for seed, yielding up to 60 to 70 bushels per acre. Excellent poultry feed. Needs warm weather and soil for quick germination. Sow 40 to 50 lbs. to the acre. Drill in close rows or broadcast.

ALTA FESCUE New Wonder Grass

There's nothing like it. Heavy yielding wonder grass lives 20 years or more, is highly palatable, a summer producer, soil builder and weed eradicator.

Alta Fescue produces as much or more fall and winter foliage as other grasses adapted solely to those seasons. Produces more summer foliage than all but the strictly summer-growing grasses. High feeding value and palatability. Rapid recovery after pasturing. Wide adaptability to soils, climate, and moisture. See Field Seed list for prices.

U. S. Department of Agriculture says: "Ladino is the largest growing form of White Clover. It is similar to White Dutch, but grows twice as large." It is a long-lived perennial, excellent for grazing, as well as producing a most nutritious and palatable hay crop. Its tap root goes down one to three feet. The stems run on the ground, taking root. It is not subject to Alfalfa diseases and is ideal to plant after Alfalfa. It does not bloat livestock as much as other Clovers, but is safer to plant with Timothy, Red Top, Meadow Fescue, Kentucky Blue Grass, Orchard Grass and Rye Grass.

See Farm Seed Price List for quantity prices.

Orchard Grass

One of the best long-lived, deep-rooted grasses for year round pasture or hay or to reseed on old Alfalfa sods. It does well on practically every type of soil, including acid soils, thrives in the shade, grows vigorously and produces large crops of nutritious hay relished by all livestock. It recovers quickly when cut or grazed. It grows the year round with maximum growth in the spring and fall. Should be included in every hay or pasture mixture. Sow 14 lbs. per acre with other grasses or 30 to 35 lbs. alone in early spring or fall.

"Certified" Sweet Sudan Grass

SWEET SUDAN is a greatly improved Sudan Grass from a hybridization of Leota Red Sorghum on common Sudan. It has great palatability, livestock eating it to the ground before touching common Sudan or other forage Sorghums. SWEET SUDAN has broader leaves, larger stems and makes taller growth, stooling heavier than common Sudan. It is a truly great improvement over common Sudan, and in our opinion will completely replace common Sudan in a few years. We recommend that every farmer put in at least a part of his Sudan acreage with SWEET SUDAN to prove to himself the many advantages for both hay and grazing over common Sudan. Not recommended for pasture in sections where Sudan will sunburn as Sweet Sudan is a cross with Leota Cane.

See Price List for quantity prices.

"Certified" Sudan Grass

Sudan Grass is primarily a hay grass, its slender leafy stems making it easy to handle with ordinary haying machinery. It makes its greatest growth and produces the most feed during July, August and September, when native grasses are less productive. It can be grown successfully on almost every class of soil from a heavy clay to a light sand, besides being particularly drought and heat resistant. Primarily an excellent hay crop, Sudan is gaining in popularity as a summer pasture. Ready to cut in 45 days. Sow after the ground becomes thoroughly warm, preferably broadcast at the rate of 20 to 25 pounds per acre. A grain drill may be used, set to sow two pecks of Wheat. Cut when in bloom, for at that stage the feeding value is highest.

See Price List for quantity prices.

Lawn and Crab Grass KILLERS

When Zotox is applied in the minimum solution it kills crab grass without destroying permanent lawn grasses. The selective action is attributed to the fact that crab grass has broader leaves and absorbs more of the chemical than do the narrow-leaved turf grasses. Zotox is sold in four convenient sizes. 8 ozs., \$1.00; 16 ozs., \$1.50; 32 ozs., \$2.50; 5 lbs., \$4.50.

New! DELCON APPLE

Delcon was originated by the Missouri State Experiment Station at Mountain Grove, Mo. Its parentage is Ben Davis, Jonathan and Delicious. It is a true dwarf with drooping branches.

Some dwarf apple trees are made by multigrafting, a complicated process which is more expensive and when you end up you don't have much of a tree, and they have to sell for five or six dollars. But Delcon is a single-graft, a true dwarf, a small tree (for easy picking) with full-sized apples. Perfect for the back yard.

The fruit is fine grained, juicy, and has some of the flavor of both Delicious and Jonathan. It produces heavy at an early age, seldom needs thinning, ripens about ten days before Delicious, and keeps well in storage.

Archias' Quality LAWN GRASS SEEDS

Now—HORMONE and ARASAN treated—at no extra cost.

ARCHIAS' HORMONE AND ARASAN TREATED LAWN SEED will give you a healthier, greener, more permanent lawn than untreated seed will. The Hormone treatment causes more seeds to grow, gives them more strength to root, and "take hold." The addition of Arasan makes seed more resistant to "damping off" and other soil borne diseases. The combination of the two makes for a healthier, greener lawn.

You use less of Archias' lawn seeds because our seed is cleaner, more weed and chaff free. For new lawn—sow at the rate of 1 pound to 250-400 square feet. To replenish old lawn, cut quantity in half.
